

DVD Rental Company ERD

Assumptions

- The daily rental cost is the same for every copy of a movie at a branch, but can differ between branches, so it's stored in branch_movie.
- The member's name and the movie title on a rental come from linked tables and aren't stored twice.
- dateReturned is empty while a DVD is still out.
- The 10-DVD rental limit is mentioned in the instructions, but we can't show it in the ERD.
- A staff member's current branch is stored, any transfer history isn't kept.

Travel Consulting Company ERD

Assumptions

- A team's current region is stored and if they get reassigned, we don't store that history.
- Each region is handled by at most one team at a time.
- Monthly call statistics are calculated from the call table.
- A consultant can belong to more than one team, so team_assignment does that.
